About this Live Webinar

A comprehensive seminar that provides valuable tools for evidence-based evaluation, assessment and treatment of pediatric toe-walking with a descriptive, organized approach for health care professionals.

Gain comfort with the evaluation and treatment of pediatric toe walking; It is common for the practitioner to feel lost when a child presents with a toe walking gait pattern. Both evaluation and treatment of these children are often frustrating for all involved and frequently results in inaccurate evaluation with ineffective intervention and poor achievement of results. Long term results are rarely achieved with either resultant surgical intervention and/or a reoccurrence of the problem. However, establishing a specific approach to treating this type of patient can be made less frustrating and more rewarding by asking the right questions and forming a deliberate approach.

This course is excellent for alleviating a chaotic approach to the treatment of pediatric toe walking. Through an organized evaluation procedure, specific data will be used to direct the clinician to potential etiologies. Causes and appropriate intervention strategies are identified in order to utilize a systematic approach to developing an effective treatment plan.

Learning Objectives

- Identify specific etiologies relevant to pediatric equinus gait
- Choose evaluation tools to determine etiology of toe walking in the pediatric population
- Apply an evidence-based treatment strategy based on etiology of a child who toe walks
- Prioritize the treatments within an individualized treatment plan for the pediatric patient, based on the needs of the child and family
- Determine the future consequences of incorrect intervention
